C2G

Discontinued - 3ft (0.9m) SCSI-3 MD68 M/M Cable (Latch Clip)

Part No. CG-07862

Ultra SCSI (or SCSI-3), is the latest of the ever-improving SCSI standards, and is the cable of choice for such peripherals as the Iomega® zip drive. It includes specifications for a single-ended as well as a differential bus style. The single-ended is similar to Fast SCSI-2, except that it accommodates addressing up to 32 devices over a 16 bit single cable bus. This style also increases data throughput up to 20 Mbps in single-ended applications.

Single-ended SCSI-3 is limited to 4 devices over 3 meters or 8 devices over 1.5 meters. Differential SCSI refers to a bus configuration using two wires per signal, with the signal being derived by the voltage difference between the two wires. This approach effectively eliminates noise on the SCSI bus and allows bus length to increase up to 25 meters.

Specifications

General Info

Product Line	C2G	Color	Beige
Warranty Type	Lifetime	Type	Cable

Dimensions

Cable Length	3 ft

Technical Information

Connector 2	MD68 Male	Connector 1	MD68 Male
