PC | NETWORKING | AUDIO/VIDEO | MODULAR A/V CABLING

## TIRED OF KEEPING TRACK OF ENDLESS PARTS?

Stop wasting productive time organizing too many cables and connectivity parts.

## CONSOLIDATE WITH CABLES TO GO KITTING.

Let us do the work for you. For an extremely affordable price we will combine all of the parts you buy from us into a single box or bag to fit your specific installation or job requirements.

This will not only simplify your installation process, but will significantly reduce the risk for errors. Your warehouse personnel will now only have to pull one kit that includes everything you need for the installation, instead of pulling all of the individual products that can easily be overlooked or left out.

---

## HERE'S JUST ONE EXAMPLE OF OUR KITTING SERVICES IN ACTION:

A commercial project encompasses 750 rooms, and each room requires five different Cables To Go items for a total of 3,750 parts. By kitting those five parts into a single box, we can help you streamline significantly. You now have only one part number and one box to account for in each of the 750 rooms.

*" We have been able to reduce part number maintenance in our system by 30% through customized kitting services offered by Cables To Go. "*

## SAVE TIME ORDERING

Requesting one part number instead of countless numbers simplifies your PO process and makes ordering a breeze.

## WITH CABLES TO GO CUSTOM KITTING, YOU'LL:

### SAVE TIME STAGING -

Instead of handling multiple boxes and pieces, kitting gives your employees the convenience of having to account for only one box – which means they'll stage the job faster and start it sooner.

### SAVE MONEY ON WASTE REMOVAL -

By requesting that cables are removed from their boxes or polybags before being kitted, you'll cut down on the time it takes to unwrap each item during installation.

Since there will be less trash to clean up onsite, you'll save money on the number of people you need to employ for waste removal. And you'll be making a step towards your Green initiative by reducing the leftover waste before it gets shipped out to your job site.

### REDUCE ERRORS -

No more entering a line item for every cable you need on your purchase orders. With Cables To Go kitting, you'll only need to enter one easy part number when ordering – greatly reducing the potential for order entry errors.

### MAINTAIN EXCLUSIVITY -

With kitting, you're assigned a custom part number generated specifically for your individual job. Now you have the ability to customize your solution by project using a kitted solution. This will help differentiate your solution among your competition as well as streamline your offering.
