Avoid the hassle of punching down numerous pairs of UTP wire by simply connecting via the Telco connector. The breakout cables comes standard with twelve RJ45 terminated legs, and your choice of aa 180° or 90° hood on the Telco connector. Components meet or exceed EIA/TIA and ISO/TEC standards while data transfer rates can reach up to 100 MHz. Near-End Crosstalk (NEXT) levels are drastically reduced by maintaining the wire twists up to the point of termination on the Telco side. Finally, we use a short-body RJ45 plug which also helps to preserve signal integrity.
