

C2G
Discontinued - 100ft (30.5m) Velocity™ S-Video + RCA Stereo Audio Cable
Part No. CG-29130

Connect digital camcorders, satellite receivers, DVD players, PC with TV out or any video source with s-video output jacks to a TV, monitor or a/v receiver with s-video input jacks. Our s-video cable also provides the right solution for connecting extended definition video recorders or digital satellite systems to your audio/video receiver. Twisted-pair oxygen-free copper conductors and foamed dielectric create a high quality audio connection.

Carefully designed dual 75 Ohm precision video conductors ensure optimal video quality. Individually shielded Y (luminance) and C (chrominance) conductors are combined with an overall aluminum foil and OFC braid shield to protect against radio frequency interference (RFI) and electromagnetic interference (EMI). This cost-effective high-performance cable ensures maximum video quality when compared with s-video cables typically included with consumer electronics products.

Oxygen-free copper wire and the 24K gold-plated OFC connectors deliver all the detail, color and brightness you expect from your s-video component. Fully molded connectors provide excellent strain relief while the stylish, ultra-flexible PVC jacket enhances cable durability for years of audio/video enjoyment.

Please Note: In addition to fitting standard 4-pin s-video jacks, the Velocity s-video cable fits most 7-pin jacks found on desktop and laptop PCs with a TV out jack.
