

The second generation of the TruLink USB to VGA Kit provides a powerful solution to stream video to a remote monitor, projector or television. Engineered to incorporate Ultra-Wide Band technology (UWB), this kit allows for in-room wireless connectivity up to 30 feet (line of sight) between the computer and display. Setup is simple and usage is seamless because all required video drivers are embedded in the host adapter. After initial software set-up, this device provides a plug and play experience for the user. Our new Quick Link feature allows additional users with host adapters to quickly connect to the device adapter with no additional steps required to “pair” the devices.

This highly secure wireless connection is ideal for classrooms, conference rooms or to display video content from your laptop to your home entertainment system. Two flexible device adapter mounting options are included, a desk mount and a wall mount.

## Specifications

### General Info

Product Line	C2G	Color	Black
Type	Kit, Receiver, Transmitter		

### Technical Information

Video Resolution	UXGA (1600x1200)	Cable Diameter	3.5 mm
Adapter Rear	VGA Female	Adapter Front	USB-A Male
