

This Right Angle Optical Mini TOSLINK to TOSLINK Adapter is the perfect solution for connecting a full size TOSLINK cable to a Mini TOSLINK port. This adapter also provides the benefit of being right angled, which allows for an easy connection in a tight space and properly orients the cable to reduce stress on the connector and strain relief. Enjoy full, multi-channel, optical digital audio through this adapter, which is ideal for home theater or other surround sound systems. The optical digital audio is a light signal; thus reducing the chance of RFI, EMI or ground loop interference. The compact design of this adapter make it easy to install and use.

**Note:** This adapter supports optical digital audio and is not designed to adapt a 3.5mm Stereo Audio port to a TOSLINK port.
