

Machined from brass, these connectors are 24k gold-plated for years of oxidation-free operation. Proper connector geometry ensures that the 75 Ohm impedance is maintained across the connector for maximum signal transfer. These connectors are designed to provide a snug, but not overly tight fit when mating with your a/v device's input and output jacks. The embossed textured grip on the metal shell provides better leverage for insertion or removal of the connectors. Use for cables with an outer diameter up to 8.5 mm.

Connector: One RCA Female
