RapidRun® is designed to be the standard for in-wall audio/video installations. The RapidRun system empowers you to customize your installation to create your own ideal audio/video solution. Break-away flying leads and wall plates ensure flexible, efficient, high quality connections for all types of equipment.

Use this flying lead when one male DB9 connector and an s-video connector are used as when RS-232 control is needed for an s-video device. Whether hanging a projector in a classroom or installing a commercial digital signage system, a clean, crisp signal is delivered every time.

Please Note: Each complete RapidRun solution requires a break-away flying lead or wall plate to terminate each end of the runner cable. For each runner you will need (2) break-away flying leads, (2) wall plates, OR (1) break-away flying lead and (1) wall plate.

Specifications
