

This is the right cable to install audio throughout your house. Made from 65 strands of 99.9% high-purity copper, this speaker wire is very flexible and unlikely to kink during installation. CL2-rated for use inside walls, this wire features twisted-pair conductors to make the wire much easier to pull throughout the house than flat or zip-cord style speaker wire.

Twisted pairs also help to cancel common-mode noise. The flame-retardant white PVC jacket helps to diminish the potential of fire spreading between floors. Inner conductors are color-coded for easy identification.

Features & Benefits

In-wall, CL2-rated jacket

12 AWG stranded conductor construction

Color coded conductors
