

PRODUCT SUMMARY

Get the performance you expect from your IDE devices by using Cables to Go Ultra ATA 40 & 80 conductor ribbon cables. The high-speed UDMA interface allows the host computers to send and retrieve data faster than ever before—removing bottlenecks to your systems performance. That's why you NEED the next generation in IDE cables to make the connection to the new Ultra 133 hard drives and DVD recordable drives. Our high performance dual drive Ultra 133 molded IDE cables not only enhance throughput, they also maximize air-flow.

Cables to Go Ultra ATA EIDE cables are designed for use with Ultra133 and Ultra100 drives, and are backwards compatible with Ultra66 and Ultra33, IDE/ATAPI hard drives, CD-ROMs, CD-R/CD-RWs, tape drives, zip drives, LS-120s and other IDE/ATAPI devices. You can choose from 40 or 80 conductor cables, flat-ribbon, rounded or molded conductors, 18" 24" or 36" lengths. Our cables are designed to permit the highest data transmission rates, the largest reduction in crosstalk, and the most improved signal integrity in the industry. With choice like these, you can't go wrong. Cables to Go makes the connections you need.

FEATURES AND BENEFITS

- Supports Transfer Speeds up to 133Mbps*
- Industry Standard Compatibility with all Internal IDE/ATAPI Devices
- Available in 18", 24" and 36" lengths
- Packaged in Flat Ribbon, Rounded and Molded Form Factors
- Master/Slave Dual Drive Support, Color-Coded on 80 Conductor Cables
- 80 Conductor Cables Reduce Interference and Crosstalk
- Rounded and Molded Cables Decrease Airflow Resistance
- Lifetime Warranty Against Manufacturer's Defects

* Your burst rates may vary due to number of conductors, cable length, and type of drive and controller used. Cables To Go recommends 18", 80 conductor cables for Ultra DMA 133 performance.
