

DisplayPort Active Adapter Wall Plates

The DisplayPort™ to HDMI, DVI or VGA active adapter wall plates convert a DisplayPort video output to HDMI, DVI or VGA using a wall plate—which offers a more secure installation option over traditional adapter dongles. The Decora style wall plate provides a secure mount within the wall and is not likely to be stolen or misplaced. Use the enclosed three meter DisplayPort cable to connect a PC to the wall plate for video signal transmission and power required for the wall plate’s operation.

This adapter allows for PC content to be displayed on virtually any display at resolutions up to 1080p. This Decora style wall plate is designed for use with standard Decora compatible face plates. The wall box design provides shielding to protect against EMI/RFI.
