

### TruLink® Power Over Ethernet Power Adapter

**Eliminates the need for an external power supply or POE switch for POE enabled devices connected to an existing local area network.**

The Power Over Ethernet Power Adapter acts as a replacement of bulky power bricks for devices connected to an existing Ethernet switch. Eliminate the need to replace your existing network hardware with expensive new POE switches. Simply connect the POE Power Adapter to an existing Ethernet switch then connect VoIP phones, wireless access points, security cameras, printers, etc. with standard networking cables. Power for the networked device will be carried over the network cable, eliminating the need for an external power brick.

By supplying power over an Ethernet cable, the need for external power is eliminated. This is ideal for situations where the networked device needs to be placed in a remote location where no power outlet is available.

#### Supportive Benefits

- Eliminates the need for external power adapters or expensive POE switches to power POE enabled networked devices such as VoIP phones, wireless access points, security cameras, printers, etc.
- Allows remote placement of networked devices where no power outlet is available
- Works with an existing Ethernet network equipment
- Capability Point: 48V Power Output
