

Duplex 62.5/125 Multimode Fiber Patch Cable

More colors to coordinate your fiber optic patching systems

Fiber patch cables are the backbone of the fiber optics industry. These fiber patch cables are strands of optically pure-glass as thin as human hair. These cables carry information via-mode of transmission of light. Short patch leads usually made with stranded wire are flexible patch cables. The fiber patch cables are used to plug one piece of equipment into another.

Multimode fiber patch cables are used in computer industry which is standard for data applications like local area network, wide area network, etc. It offers high bandwidth over greater distance with no danger of electrical interference. Fiber patch cables are the most opted solution these days for the networking and broadcasting industry.

Application:

- Use to add segments to your existing network such as alarm systems, LAN etc.
- Use by utility companies for network management
- Use to provide higher bandwidth for future expansion

Common Uses:

- Medical Imaging
- Mechanical Engineering
- Colleges and Universities
- Military and Airplanes to Prevent Jam or Tap
- Cable TV Companies

Specifications:

- Fiber size: 62.5/125 micron
- Multimode, Duplex
- Connector: Please check the fiber Patch cable grid on our website for more information
- Color coded connector keys available in red, green, black and more. See website
- Latch design prevents the plug from snagging when jumper cables are being routed
- Immune to electrical interference
- Warranty: Lifetime
