Audio/Video Distribution Amplifiers

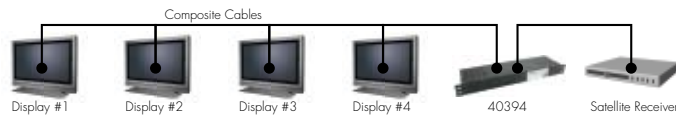

Use to distribute a single audio/video device to multiple locations

Audio/video has evolved to become the medium of choice for business owners wanting the competitive advantage for customers, and is a major factor for patrons that visit their favorite clubs and taverns. Whether greeting customers at the door, displaying daily store specials in every aisle, or showing the "big game" to a group enthusiastic sports fans on a weekend afternoon, audio/video draws them in. Unfortunately a poorly designed system is far from impressive with distortion throughout the picture and audio that is difficult to understand.

A good audio/video distribution system will consist of a video source, a distribution amplifier, well assembled cables and quality display devices. Impact Acoustics Audio/Video Distribution Amplifiers are specifically designed to deliver the high quality video and sound your customers demand and expect. Unity gain ensures that the output signal is virtually identical to the input signal. Cable runs up to 150 feet are not a problem, and multiple amplifiers can be daisy-chained together for a nearly unlimited number of display connections. These distribution amplifiers are ideal for all of your home theater, boardroom, nightclub, sports-bar and school applications...the uses are endless!

Specifications

- Daisy-chain amplifiers for more displays
- Unity gain ensures output level is equal to input level
- Rack mountable with removable rack ears

Item #	Description
40394	4-Output Video/Stereo Audio - 1RU
40395	7-Output Video/Stereo Audio - 1RU
40396	4-Output Video/S-Video/Stereo Audio - 1RU
40397	4-Output Component Video/Stereo Audio - 1RU
40398	9-Output Component Video/Stereo Audio - 2RU
40399	5-Output Video/Stereo Audio, Component Video plus S/PDIF - 2RU
40400	9-Output Video/Stereo Audio, Component Video plus S/PDIF - 2RU
