

TruLink® Media Gateway Connectivity Panels – Medical Grade

All-in-one connectivity panel for connecting multiple A/V devices to a display

The TruLink Media Gateway is a powerful all-in-one audio/video connectivity panel that enables users to easily and simply connect a wide array of consumer electronics devices to an HDTV. This active connectivity panel provides hassle-free connectivity for laptops, iPod®/iPad®/iPhone® devices¹, digital/video cameras, Blu-ray™ or DVD players, and game consoles to HDTVs or projectors. The automatic switching functionality provides ease of use, while the USB port adds a convenient way to charge portable electronics. Designed to mount on conference room tables, podiums or other caseloads, its versatility makes it a real problem solver for multiple applications in the corporate, education, healthcare, and hospitality markets. The medical grade power supply is designed to comply with safety standards required in healthcare facilities.

The TruLink Media Gateway is able to automatically upscale 480i (NTSC) and 576i (PAL) composite video and video signals from iPod®/iPad®/iPhone® devices¹ up to 1920 x 1080p and display native HDMI® digital video signals up to 1920 x 1080p. It also supports resolutions of up to 1280 x 1024 through the HD15 (VGA) input. The TruLink Media Gateway is designed for easy maintenance and support. Firmware updates can be deployed manually via the front USB port or automatically through the rear Ethernet port via an FTP server, potentially saving time and hundreds of hours in labor.²

Features:

- Medical grade power supply
- Single HDMI output for all audio and video inputs
- Works with all HDTVs from 480i (NTSC)/576i (PAL) to 1080p
- Consumer Electronics Control (CEC) and RS232 serial support to control HDTVs, projectors, and monitors
- Supports audio/video signals from iPod®/iPad®/iPhone® devices; Made for iPod/iPhone certified
- Connected device detection allows automatic switching between video inputs
- Charges portable electronic devices via the USB port (500mA)

Item#	Description
41271	TruLink Media Gateway Connectivity Panel Desk Mount—Medical Grade—Standard Black—D2
41281	TruLink Media Gateway Connectivity Panel Furniture Mount—Medical Grade—Standard Black—F1
41283	TruLink Media Gateway Connectivity Panel with iPod + Ethernet Furniture Mount—Medical Grade—Standard Black—F2

Note: The TruLink Media Gateway is FCC certified Class A for commercial applications and should not be used in residential installations

Due to Apple® using the Lightning connector on the iPhone 5 instead of the 30-pin dock connector, the iPhone 5 is compatible with the Media Gateway for charging only. To charge the iPhone 5 it must be connected to the USB port on the Media Gateway using an Apple® Lightning to USB cable. The cable used to connect Apple® devices to the Media Gateway for audio and video requires that the Apple® device use a 30-pin dock connector. We will continue to monitor the development process of the iPhone 5 for changes that may make that product fully compatible with the Media Gateway.

¹ Apple devices are not supported by the F1 Media Gateway.

² Firmware update speed depends upon the load of the network. Updates will only occur when the Media Gateway is not in use.
