### USB-VGA (Primary)

To make the USB 2.0 VGA Adapter the main display adapter in the system. The system's main display adapter (and monitor) will automatically switch to being the secondary display adapter and act as the extended desktop.

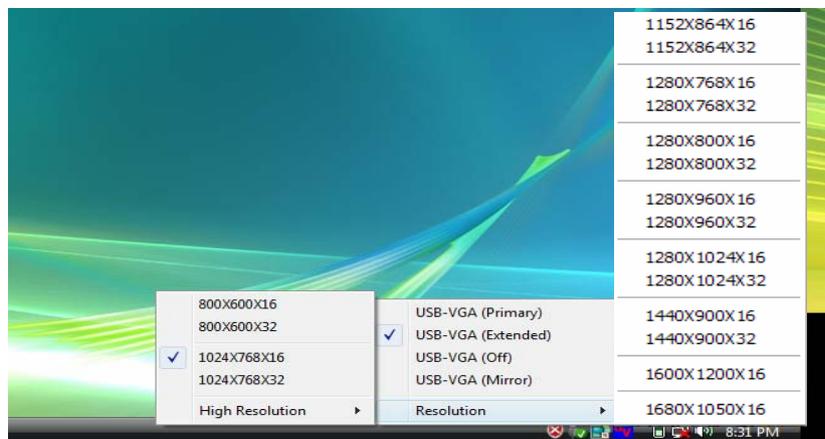

You can disable the other utility (usually found in the same toolbar located on the bottom right hand corner) to make this function work properly.

**Note:** it may disable the main display on part of graphic cards when access the Primary function.

### USB-VGA (Extended)

By default, your USB 2.0 VGA Adapter will extend your Windows desktop. You can change the relative position of this extension under the **Display Properties**. (Go to Control Panel -> double click on the **Display** and select the **Settings** tab).

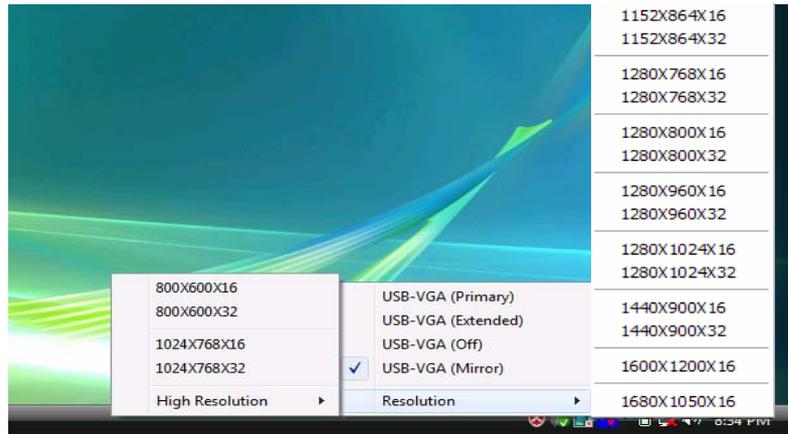

**Note:** Playback suggestion: Media Player Classic software on Windows Vista.

## Mirror

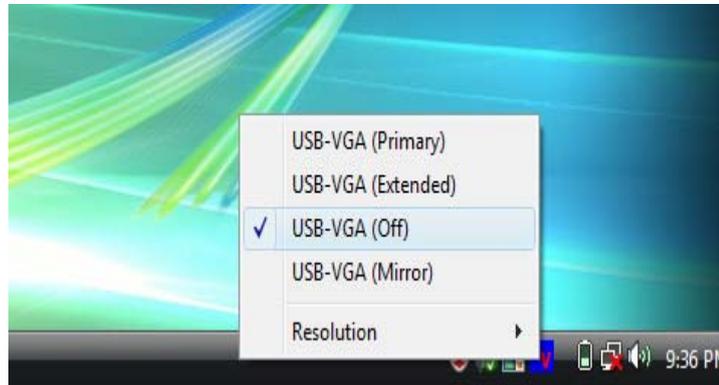

Your USB 2.0 VGA Adapter will mirror your Windows desktop.

You can see the same desktop image on both monitors.

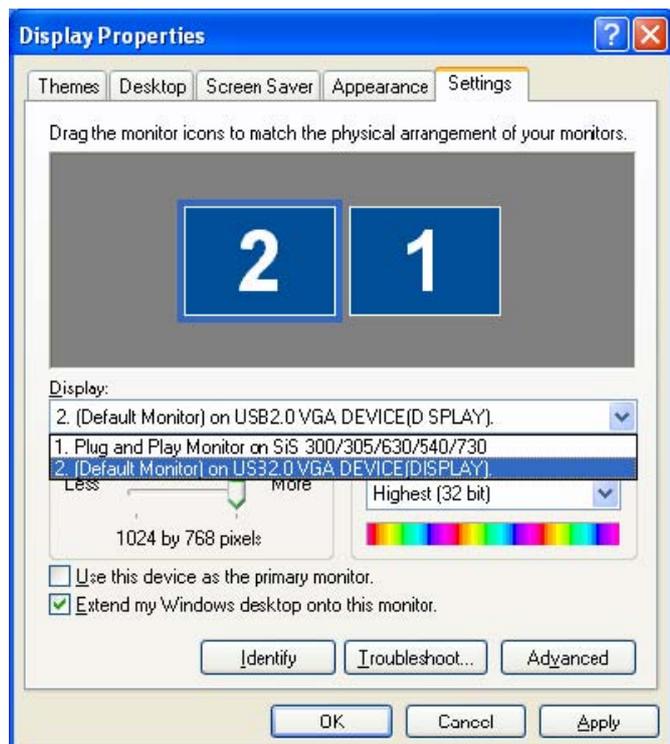

## USB-VGA (Off)

This option disables the USB 2.0 VGA Adapter on the system.

## USB 2.0 VGA Adapter Properties

To access the Display Properties for the USB 2.0 VGA Adapter, go to **“Control Panel”** and double click on the **“Display”** icon. Select the **“Settings”** tab. ## Frequently Asked Questions (FAQ)

**Q:** Why can't I make the USB 2.0 to VGA Adapter the primary display?

**A:** Some video cards ship their product with a utility that prevents other video cards from being set as the primary card. Check the bottom right hand corner taskbar for the utility. Disable the utility before switching the USB 2.0 to VGA adapter to be the primary display.

**Q:** Why won't my DVD player work when I move it over to the extended display?

**A:** Some DVD playback software packages do not support playing on a second display adapter of any kind.

**Q:** Why won't my video play on Media Player if I move it over to the extended desktop?

**A:** Check that you have moved the Media Player window completely over to the second screen.

**Q:** Why won't my mouse move pass the right side of the screen as it should on extended desktop?

**A:** Check the display settings and make sure that your display number '2' is on the right side of display number '1'. You can rearrange how Windows treats each display in relation to each other in the Display Properties Settings.

**Q:** There are lines running horizontally up and down my screen.

**A:** This is due to a low refresh rate setting. You can change this in the "Display Properties", "Settings", "Advanced", "Monitor". Make sure you select the USB 2.0 VGA Device first and not set the refresh rate higher than what your monitor can support. This may damage your monitor. You can also try to reset/refresh/resynchronize your monitor.

**Q:** Direct3D does not work.

**A:** This is a current limitation of the adapter. Please check for driver updates in the future to add support for this. If your application requires this, please use the main display adapter.

**Q:** Why won't the Adapter work on Windows Vista 64 bit version?

**A:** Currently, the driver is compatible with Windows Vista 32 bit version only. Please check for the driver updates in the future.

## Troubleshooting Tips

The following troubleshooting tips may help if you are experiencing any issues. Contact Cables To Go Technical Support for additional help if needed.

- Check to make sure that all connectors are plugged in correctly.
- Make sure that the USB port that you are using is USB 2.0.
- Check to see that the monitor is connected correctly and the power is ON.
- Try connecting the adapter directly to the computer instead of through a hub.
- Unplug all other USB devices from the system.
- Make sure you restart your computer after the driver installation.
- Unplug the adapter and re-insert it.
- Try a different USB 2.0 port and/or computer
- Check the website, [www.cablestogo.com](http://www.cablestogo.com), to make sure you have the latest drivers.
- Reset/refresh/resynchronize your monitor.
- If you have problems during the boot up process, start your computer in Safe Mode and uninstall the driver. Hold the CTRL key until the Windows startup menu appears and select Safe Mode.
- As there is a limitation, the USB 2.0 VGA Adapter cannot be used for the viewing of DVD video movie except for the Media Player Classic software on Windows Vista.
- It may disable the main display when you access the Primary function on part of graphic cards of Intel solution.
