

Video Combiner Module

Description:

The Video Combiner Module is a combiner which combines all modulated signals into single output.

Installation: (see Fig. 1)

To install the module, simply insert tabs to the cap located on the rail of the enclosure. Press the fastener to lock the module at the desired position.

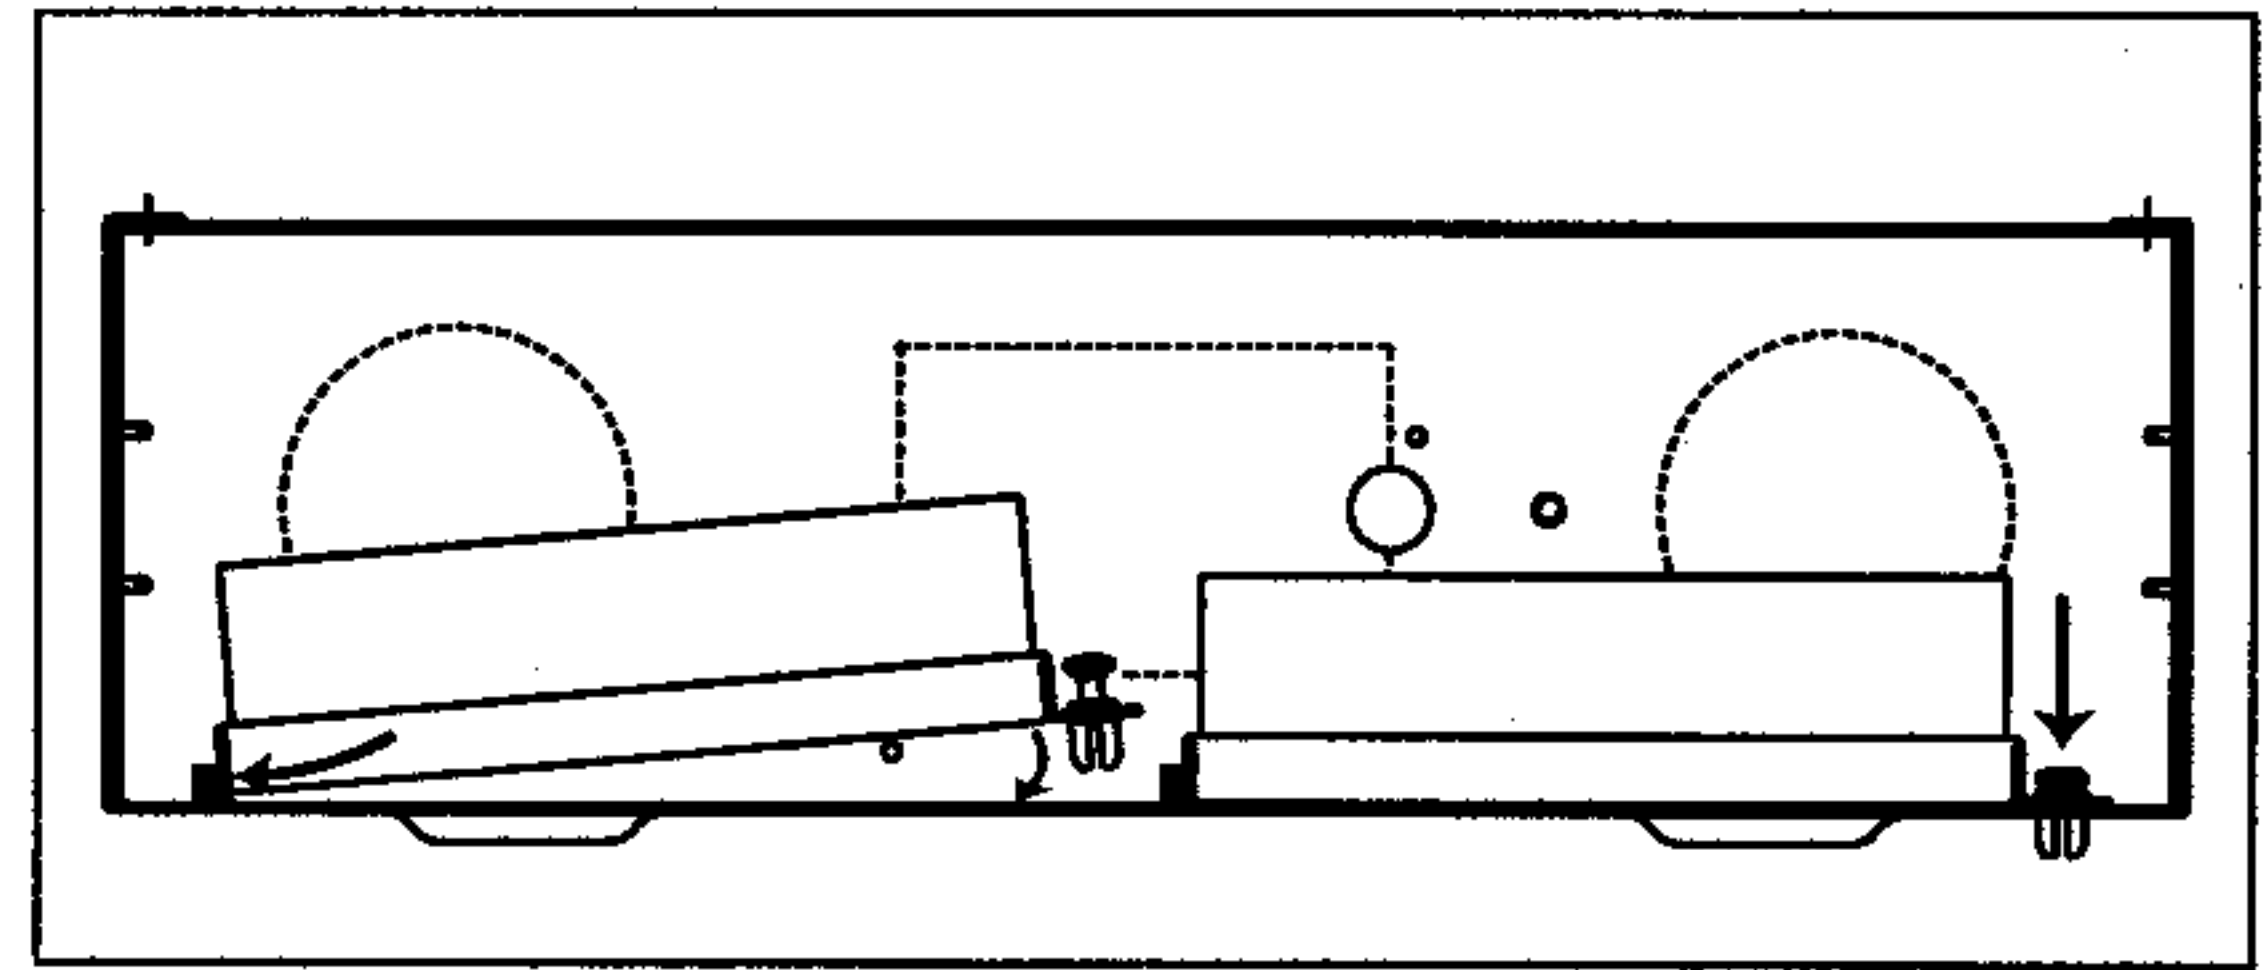

Fig.1

Operation: (see Fig. 2)

Video signals such as DVD, VCR, or cameras at front door, back yard, elder rooms and baby rooms can be modulated to any TV channel via modulators at eight locations. Those modulated signals will be combined into single output through a Video Combiner Module. The output signal can be connected to modulators input of the Video Distribution Module. Therefore, all channels can be viewed at each of eight locations without conflicts. A power adapter is included or a DC Power module (Not included) is recommended to provide more stable, protections and save much space if many other adapters applied. Please refer to the following diagram. NOTE - the modulator capability is not included in this unit.
