

Always start a meeting or class on time with the Wireless A/V for HDMI devices kit. This plug and play system allows A/V signals from a laptop, tablet, or Blu-ray player to wirelessly connect to an HDMI projector or HDTV located up to 100 feet away.

#### Straightforward install

There is no need for cables to be run under the floor, through the ceiling, or up a wall. Mount the receiver near the display and the transmitter near the presenter, then make the connections for HDMI and power on both the transmitter and receiver. This do-it-yourself solution includes all the components required for the setup and does not require an experienced A/V installer. Just plug an HDMI cable into your laptop from the transmitter, and you are ready to present. This kit offers true plug and play operation, allowing any presenter to step up and start a meeting with no lost time. There is no software to install or update, so there is no need to request permissions from IT or wait for drivers to download.

#### Effortless huddle space connectivity

Just bring your own device to the huddle space and plug in. This simple, one connection solution allows for quick transition from one user to another – encouraging productivity, inspiration, and teamwork while presenting ideas. Any room can be retrofitted to be a huddle space, as the secure wireless transmission of A/V signal does not require new cables or existing cable infrastructure.

#### De-cluttered conference room

Set up a conference room without limitations using this wireless system. The display does not have to be limited to where wire runs have been located. Place the display anywhere within 100 feet of the transmitter to achieve the optimal setup for any conference room.

#### Trouble free classroom setup

Setting up A/V equipment in a classroom often requires running cables in wall or plenum space, this type of install requires specially rated cables and professional installation. With the Wireless AV for HDMI solution there is no need to run these costly wires. The straightforward installation takes almost no time to setup and the simplified operation ensures all staff members can use it without training.

Note: The transmitter and receiver do not require line-of-sight to function. However to achieve the 100ft maximum range, reduce or eliminate the number of obstacles between the transmitter and receiver.

## Features & Benefits

- Changes the mounting orientation of the retractor
- Easy to install
- Steel construction
- Wiremold Part # TBCRHMK

## Specifications

### General Info

Product Line	C2G	Color	Black
