

The most common method of connecting an external peripheral (modem, digital camera, etc.) to a PC is via a serial port. Instead, many PC users want this connection but also want to save the ISA slot. The Lava DSerial-PCI does just that by adding two additional COM ports to any PCI-equipped PC. It improves your data throughput rate while saving valuable ISA slot real estate. With dual 9-pin serial ports with 16550 UART, it supports data throughput rates up to 115.2 Kbps on each port, saves an ISA slot, and fully supports PCI IRQ sharing.

Because both ports share one PCI bus IRQ, even when accessed simultaneously, this card only requires one system IRQ and saves valuable resources for other expansion cards. With easy plug-and-play installation, it automatically selects the next available IRQ and COM address - just plug in and go!

Specifications

General Info

Product Line	C2G	UPC Number	757120166399
Country Of Origin	Canada	Type	Accessory

Additional Information

Prop 65 Warning Required	Yes	Prop 65 Warning Language	Cancer and Reproductive Harm
--------------------------	-----	--------------------------	------------------------------

Technical Information

Adapter Front	DB9 Male, DB9 Male
---------------	--------------------
