

The Gigabit Media converter is the perfect solution for converting between a copper network and a fiber optic network. This media converter allows for bi-directional communication and is completely transparent, allowing the networks to perform exactly as it did prior to the addition of the media converter. The media converter allows for the installation of fiber or copper cabling anywhere within the network topology by connecting to existing devices. Its compact modular design facilitates space-saving deployment in a narrow desktop location.

Features & Benefits

Supports Gigabit network speeds

Compatible with Cat5e and Cat6 copper cabling

Compatible with Multimode fiber optical cabling

Duplex LC connector for a fiber connection and RJ45 connector for a copper connection

Specifications

General Info

Product Line	C2G	Color	Black
