

Come and go as you please without the hassle of repeatedly connecting and reconnecting devices to your computer. The TruLink Desktop Docking Station adds convenience and flexibility to any office environment – whether at home or at work. With universal connectivity capability, this docking station acts as a central hub for nearly any model of laptop, netbook or desktop using peripherals. This makes it a valuable addition particularly in settings when disparate brands of equipment are used or computer equipment is swapped out frequently.

A single USB connection controls the DVI-I video, four additional USB ports and Ethernet connection. After installing the included drivers, usage is plug-and-play with no computer reset or added docking/undocking procedures required. Because it uses USB 2.0 speeds, performance is smooth and reliable with no lag in video even when multiple peripherals are connected. Video resolutions up to 1900x1200 are supported through the DVI-I connection which easily converts to VGA using the included adapter.

Specifications

General Info
