

One component of a complete solution that, when paired with a transmitter (sold separately), conquers USB length limits. This solution extends the signal of a USB device to a host computer up to 150 feet, enabling you to place your USB projector, camera, printer, web cam, hub or other USB device exactly where you want it! Our USB extender dongle is powerful yet simple, with no drivers to install or special software required. It's also compatible with any computer that supports USB.

The overall plug-and-play solution consists of this wall plate receiver, and your choice of a compatible transmitter that is sold separately: the wall plate (#29344), the dongle (#29348) or the keystone insert (#29349) that fits C2G, formerly Cables To Go, RapidRun® or other standard keystones. Customize the configuration to your specific needs! This versatility is ideal for applications where you need flexibility at your computer/source side.

The complete solution is connected via a standard Cat5, Cat5E, or Cat6 UTP cable (not included) that provides easy installation. Because the USB extender dongle is bus-powered, no external power source is required. Compliant with USB specification 1.1.

Input: One USB Type B Male
 Output: One RJ45 Female

Please Note: The power demands of devices such as external drives and USB hubs may require the use of external power for proper operation.

Note: If the USB signal is being extended to support an interactive whiteboard, then we recommend using our product

Features & Benefits

- Extends a USB 1.1 signal up to 150ft over category cables
- Allows for flexible positioning of USB peripherals
- Pair with a wall plate or dongle transmitter for complete solution
