

The C2G VGA + USB KVM over Cat5 Extender is perfect for situations where the user console must be placed at a distance from the KVM. This allows you to place your computers in a secure location and your console in another, up to 150 meters away. Driving the VGA and USB signals over a Cat5E or Cat6 UTP patch cable lets you utilize your existing UTP cable infrastructure for a cost-effective and reliable installation.

This solution is ideal for industrial applications (such as manufacturing lines, clean rooms, server rooms, training presentations, etc.) where your computers need to be placed in a secure or remote location and you need your monitor, keyboard, and mouse to reach further than the 5 meter length limitation experienced by most KVM switches. No software is required for this plug-and-play solution as it works with your existing VGA + USB KVM switch.

Note: This product is designed to function with USB 2.0 ports on the PC and is not compatible with USB 3.0 ports.

Features & Benefits

- Extends VGA video and USB over one Cat5 cable up to 150 meters
- Supports up to a 1280x1024 resolution
- Plug and Play with no software or drivers required

Specifications
