

Does your entertainment system have glass or wooden doors, or are A/V components in a closet or cabinet? Without a clear line of sight, infrared (IR) signals from a remote control will not reach the equipment and it cannot be controlled. Our remote control repeater kit is the perfect solution for these situations and contains all equipment necessary to remotely operate four components using standard remotes. Mount the IR receiver in a central, visible location and connect to the IR distribution block. This block repeats the signals through emitters to the A/V components which may now be controlled while mounted in an entertainment center, closet or another room! The kit is self-contained and easy to connect.

With this kit, the receiver may be mounted in a convenient place on or near the entertainment system. The receiver has a 5 meter (16.4ft) cable that is then attached to the IR distribution block of the repeater system which may be mounted in an entertainment cabinet. The connection from the IR distribution block to up to four devices is made with the 42 inch emitter cable which connects to the IR distribution block with a 3.5mm connection then adheres to the IR receiver eye of the device.

Note: This repeater kit is not designed to be extended with a 3.5mm cable.

Features & Benefits

Allows for control of devices behind closed doors

Includes emitters to control up to four devices

LED light confirms IR communication

Specifications

General Info

Product Line	C2G	Color	Black
UPC Number	757120406969	Country Of Origin	China
Application Sector	Residential, Commercial	Type	Transmitter, Kit
