

The HDMI Inline Signal Booster Decorative Wall Plate is an excellent choice for transitioning to in-wall cabling, concealing and extending 4K HDMI behind the wall instead of running cables across the floor – perfect for home offices, conference rooms, huddle spaces, and classrooms.

Appearance matters, and the clean, professional-looking installation of this wall plate will complement any environment. The four included interchangeable wall plate covers come in white, black, beige, and brushed aluminum to match the decor of any installation.

This HDMI inline extender includes a thin, flexible HDMI pigtail that accommodates the tight bend radius required for installations within a standard junction box. With three different power options, you can choose from HDMI power supplied through the signal connection, the USB Micro B port on the front, or the power jack on the backside, offering versatility for any installation.

Features & Benefits

Supports 4K 60Hz resolution for more vivid and detailed viewing	Wall plate form factor for a clean, professional look
Interchangeable wall plate covers in different colors for matching the decor of the installation site	Flexible HDMI pigtail for easy installation in a wall box
Three power options for versatility
